

Indiana Semiconductor Industry: Potential Opportunities

February 27 | Fort Wayne | Free Workshop

Billions of dollars in semiconductor/microprocessor manufacturing investment will be starting in Indiana.

Much has been written in public press releases about these investments and the workforce education and research initiatives that complement this industry. However, little has been published regarding how existing Indiana businesses can take advantage of the new opportunities resulting from the significant investment.

Join us for this **FREE** workshop in Fort Wayne as we:

- Provide an overview of the semiconductor manufacturing growth in Indiana
- Share the results of a semiconductor industry study focused on Indiana that highlights potential opportunities
- Ask for feedback regarding the support that your business would require to address the potential opportunities

We will use this feedback from this workshop to apply for grant funding to support your diversification efforts.

Intended Audience: Business owners and leaders interested in diversifying their revenue streams.
